

# Assessing an Invention for IP Strategy

**Premnath V, PhD**

*Head, NCL Innovations | Founder Director, Venture Center*

**7 June 2024 | Workshop @ TechEx.in**

# Reminder: NCL's patent document flow and decision points

## Example: JHU Tech Ventures

<https://ventures.jhu.edu/technology-transfer/reports-of-invention/>

### Our Commitment to Service: 2-2-2

#### 2 Days

JHTV will contact you within **2 business days** of receiving your disclosure.

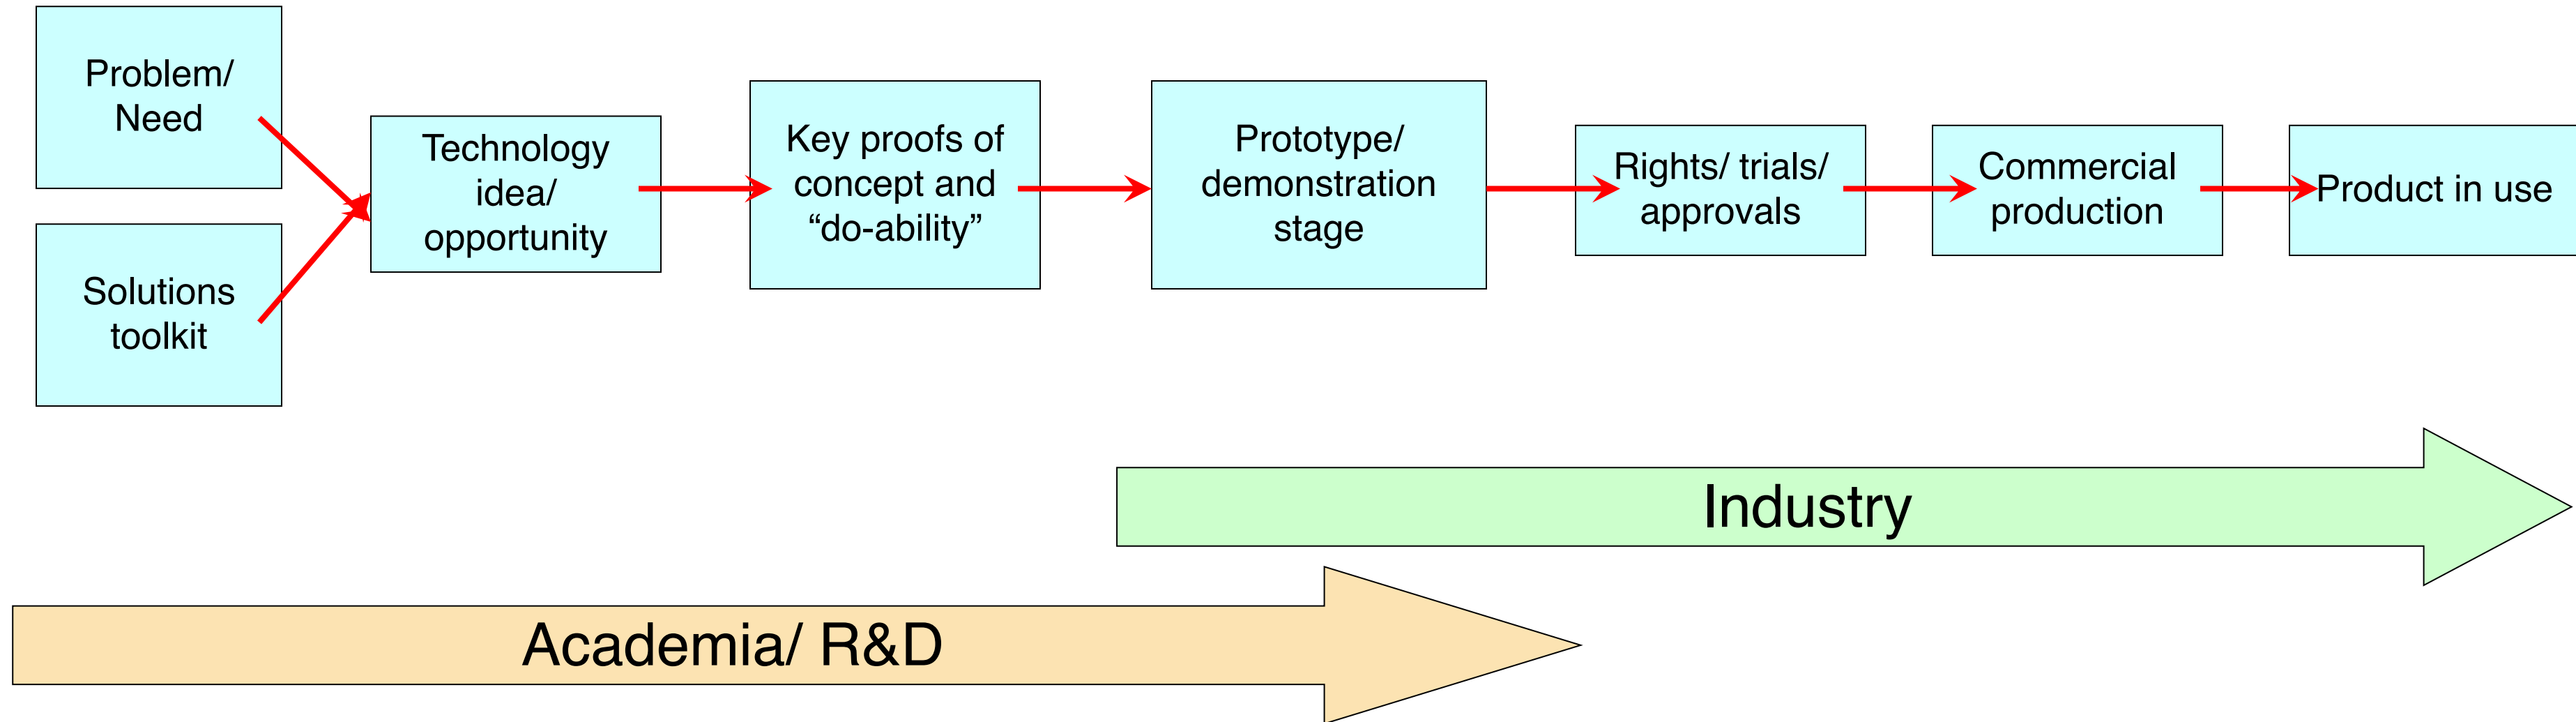

#### 2 Weeks

JHTV will confer with you regarding your disclosure within **2 weeks** of receiving your disclosure.

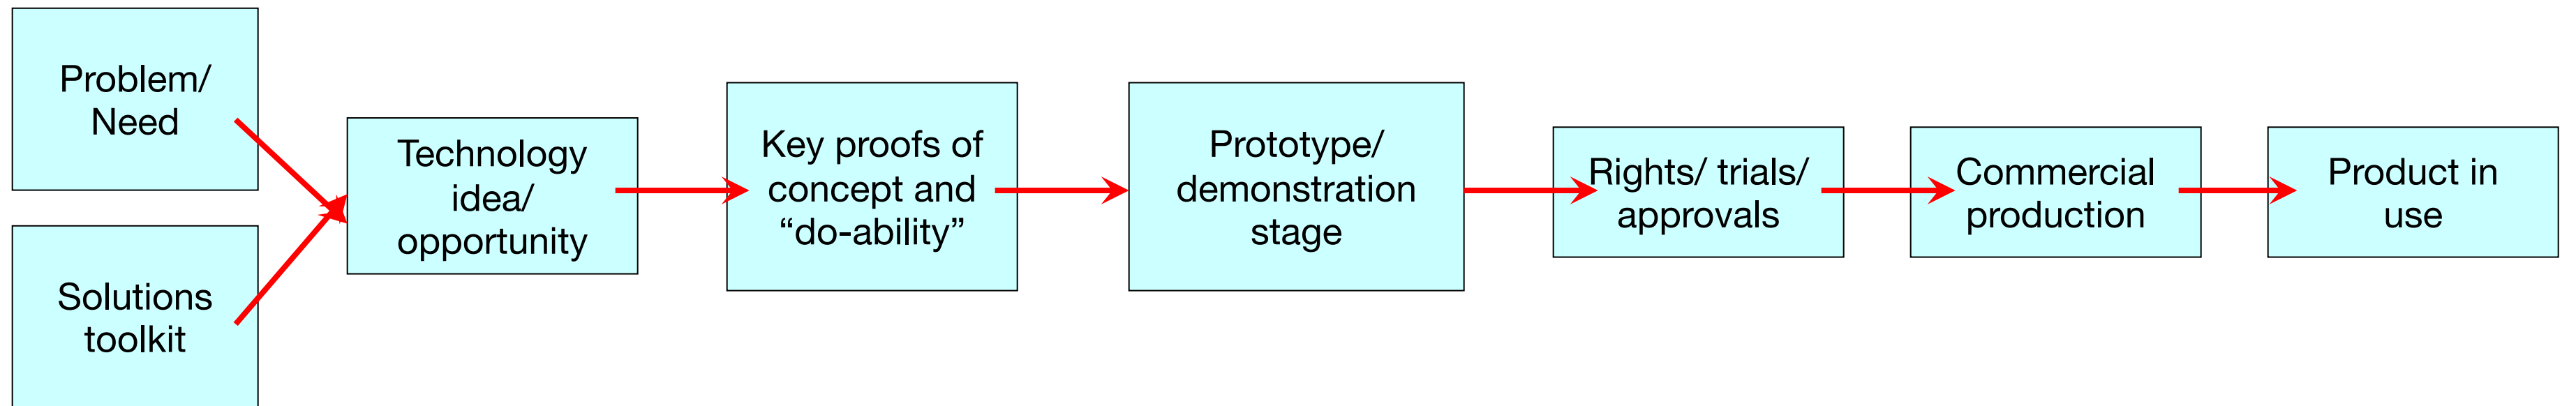

#### 2 Months

JHTV will provide a written determination within **2 months** about the commercialization plan.

# Classical technology transfer

# The gap: Interests, motivations, expectations, trust

## Gap ("Valley of Death")

- ◆ Potential opportunity and importance; Foresight
- ◆ Alternative investment opportunities
- ◆ Understanding of risk vs reward
- ◆ "Not made here"; Lack of champions

Inventors

Business

## Outline:

- ❖ Walk through the First Look Assessment
- ❖ Exercise: First Look Assessment for an Invention

-----

- ❖ Understanding the invention (problem, solution, novelty)
- ❖ Understanding potential customer segments & end product
- ❖ Understanding the value proposition against alternatives for customer segment
- ❖ Understanding the opportunity
- ❖ Understanding the risks, uncertainties, competition
- ❖ Understanding the status/strength of the technology and IP
- ❖ Understanding what KOLs/experts have to say
- ❖ Thinking through path ahead and strategy

# **Walk through the First Look Assessment**

See Handout and template given to you

## Outline:

- ❖ C1. General information
- ❖ C2. Inventor's description of the invention/ technology and related inputs (based on interview with inventor)
- ❖ C3. Case manager's description of the invention/ technology in a problem-solution approach and comparison with alternative solutions
- ❖ C4. Translation to end-products and assessment of technology
- ❖ C5. Inputs from interviews with peer experts/ industry professionals/ potential customers/ licensees/ KOLs
- ❖ C6. Summary assessment and recommendations

# **Exercise: First Look Assessment for an Invention**

# Exercise: The “special” tooth brush

# Documents for Toothbrush Example

- ❖ Indian patent
- ❖ CCAMP's Technology Brief

# Problem, Solution, Novelty

# Invention

## Examples:

- Zip/ Velcro/ Bundling tie
- (Science-led) Vaccines, drugs

## Example: Need statement

- A way to perform rapid, point-of-care testing for C19 in travelers in order to identify and restrict movement of C19 carriers.

## Example: Deep dive

- Mapping:
  - Let us focus on high-volume transport, esp. air travel.
  - Entry → departure → security → boarding → flight --> baggage → arrival → Exit
  - Who is having a need? (Gov or Pune city or travellers) What is the need?
- Comparison of alternatives:
  - Pre-certificates, thermal screening, visible symptoms, rapid test, RT-PCR
  - Compare for time, cost, false negatives, false positives, stage of infection

## Example: Problem definition

- There is a need for a 30 min rapid RT-PCR for airport departure lounges to rule out C19 carriers with 100% accuracy.
  - Use case: Airports (esp departure lounges?? )
  - Rapid: 30 min
  - Key outcome: Zero false negatives (a person who is positive should not slip through as negative)
    - Notice assumption of a solution: Only RT-PCR can do it

# Exercise 1: Problem definition

Name:

|   |  |
|---|--|
| A way to do what?   |  |
| For whom  |  |
| To achieve what outcome   |  |
| Currently available ways/<br>approaches to deal with<br>the problem |  |
| Short comings of current<br>alternative approaches                  |  |

Ref: Based on the Need Identification process of the Stanford Biodesign Program

# Potential Customer Segments and End-Products

# Customer offering

Product visualization

|                                      |  |
|--------------------------------------|--|
| Customer offering<br>will consist of |  |
| Features                             |  |

TECHNICAL DATA SHEET

MED 5589H  
Hydrocolloid

MED 5589H is a transparent polyurethane film containing an advanced and integrated hydrocolloid formulation. This product's absorbent adhesive is designed to not break down upon saturation, provides a low profile, assists in creating optimal skin and wound healing conditions and has a high fluid handling capacity.

TYPICAL APPLICATION

Designed for wound care applications and fixation of medical devices.

FEATURES AND BENEFITS

- Conformable
- Integrated hydrocolloid
- High absorption rate
- Moisture resistant
- Die-cuttable
- Gamma sterilizable

| Product Construction    |                 |        |  |
|-------------------------|-----------------|--------|--|
|                         | TYPICAL VALUES* |        | DESCRIPTION                                    |
| SUPPORT THICKNESS       | 1.0 mils        | 25 µm  | Transparent polyethylene film                  |
| CARRIER THICKNESS       | 1.8 mils        | 45 µm  | Transparent polyurethane film                  |
| ADHESIVE THICKNESS      | 23.6 mils       | 600 µm | Hydrocolloid designed for medical applications |
| RELEASE LINER THICKNESS | 5.1 mils        | 130 µm | White super-calendered glassine                |

†Refer to product specifications for material acceptance limits.

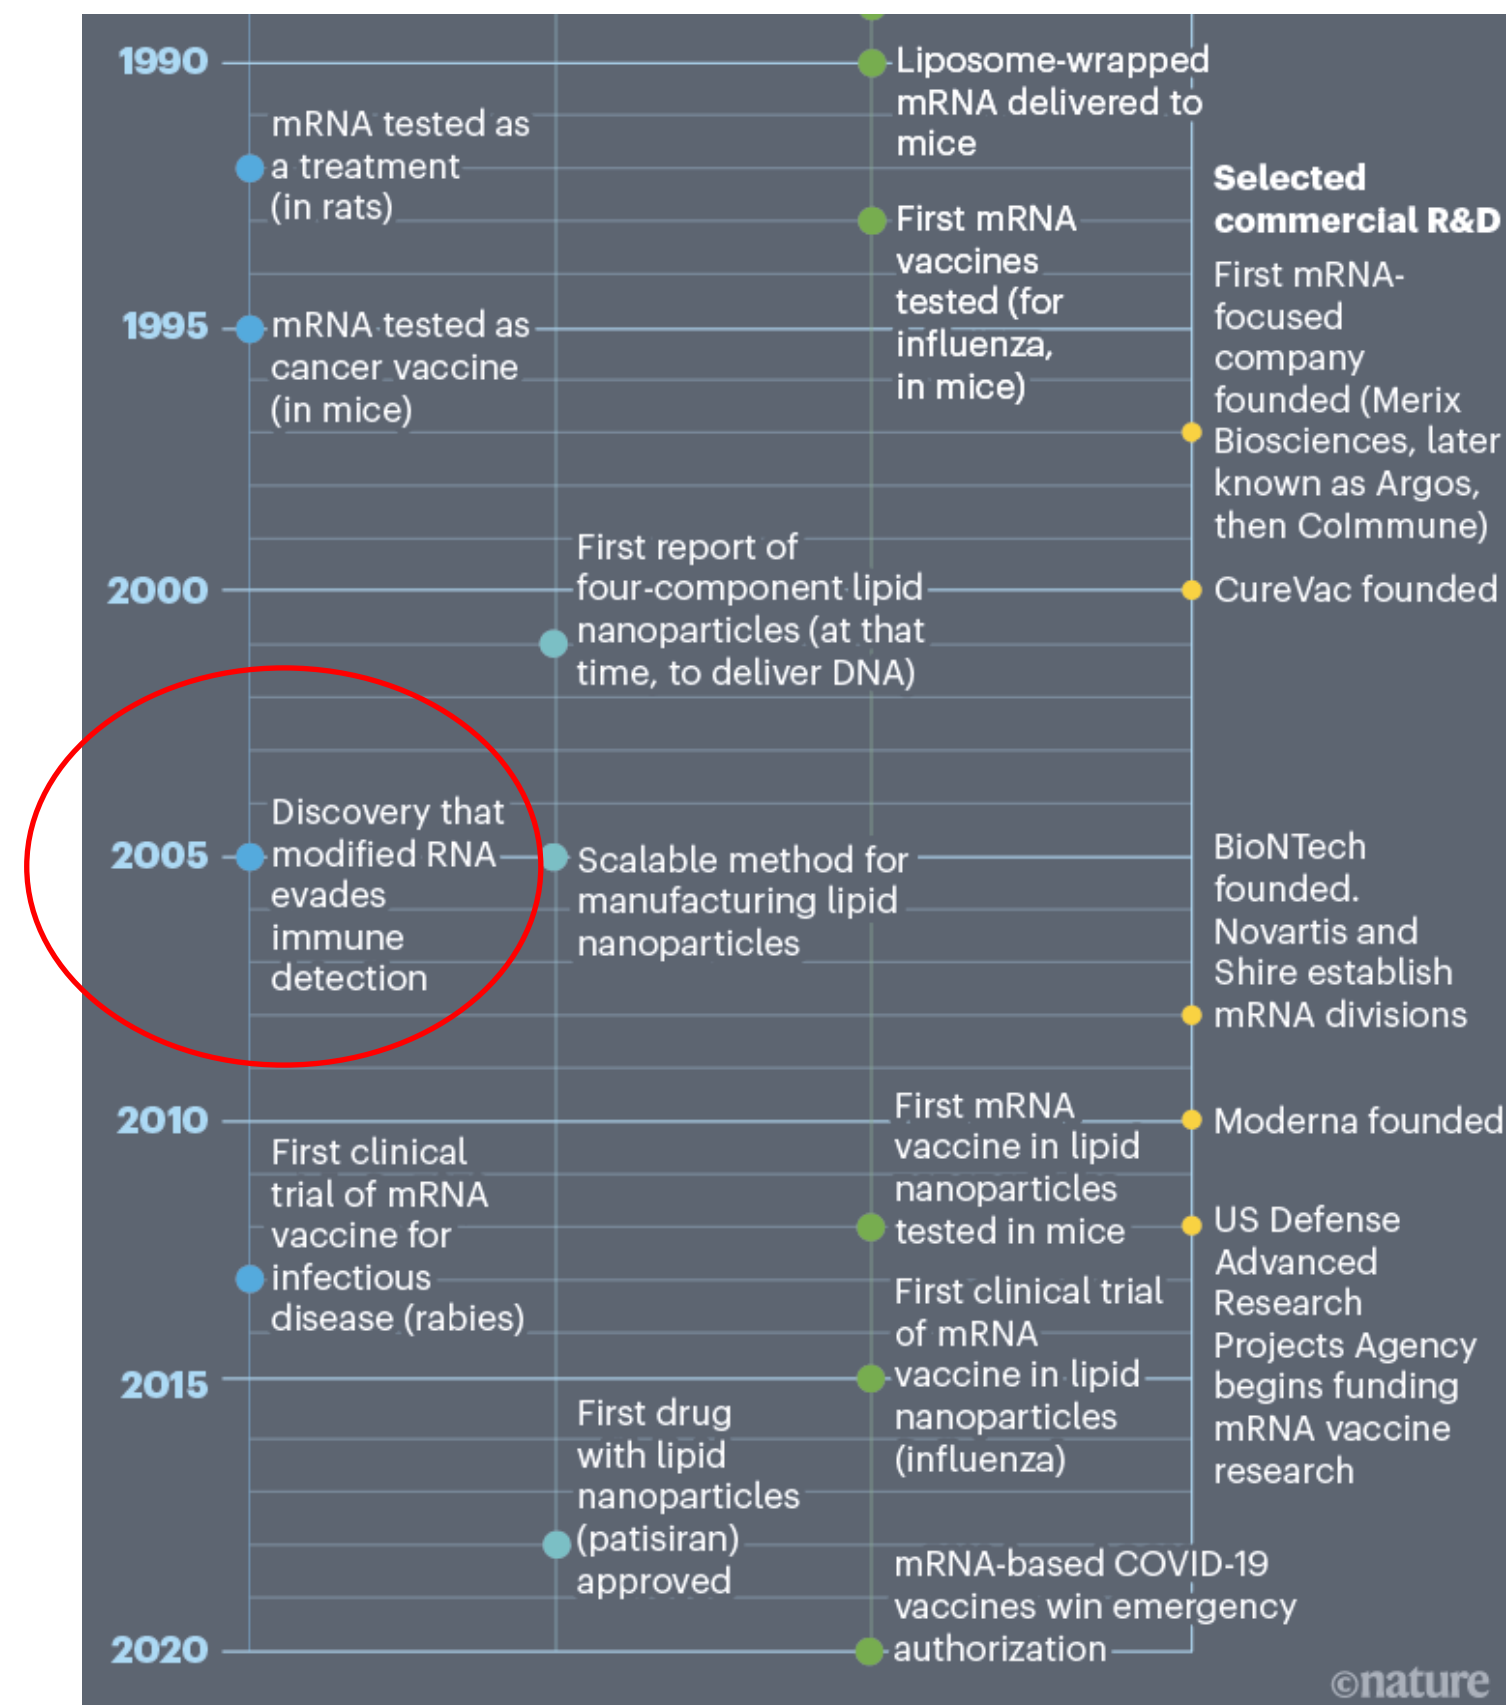

# THE HISTORY OF MRNA VACCINES

A long chain of scientific advances led to the first messenger RNA (mRNA) vaccines, released last year to protect people against COVID-19. These vaccines, as well as mRNA drugs, make use of developments in the science of mRNA and in delivery systems, which are made of lipid molecules.

# Value Proposition

# What is a Value Proposition?

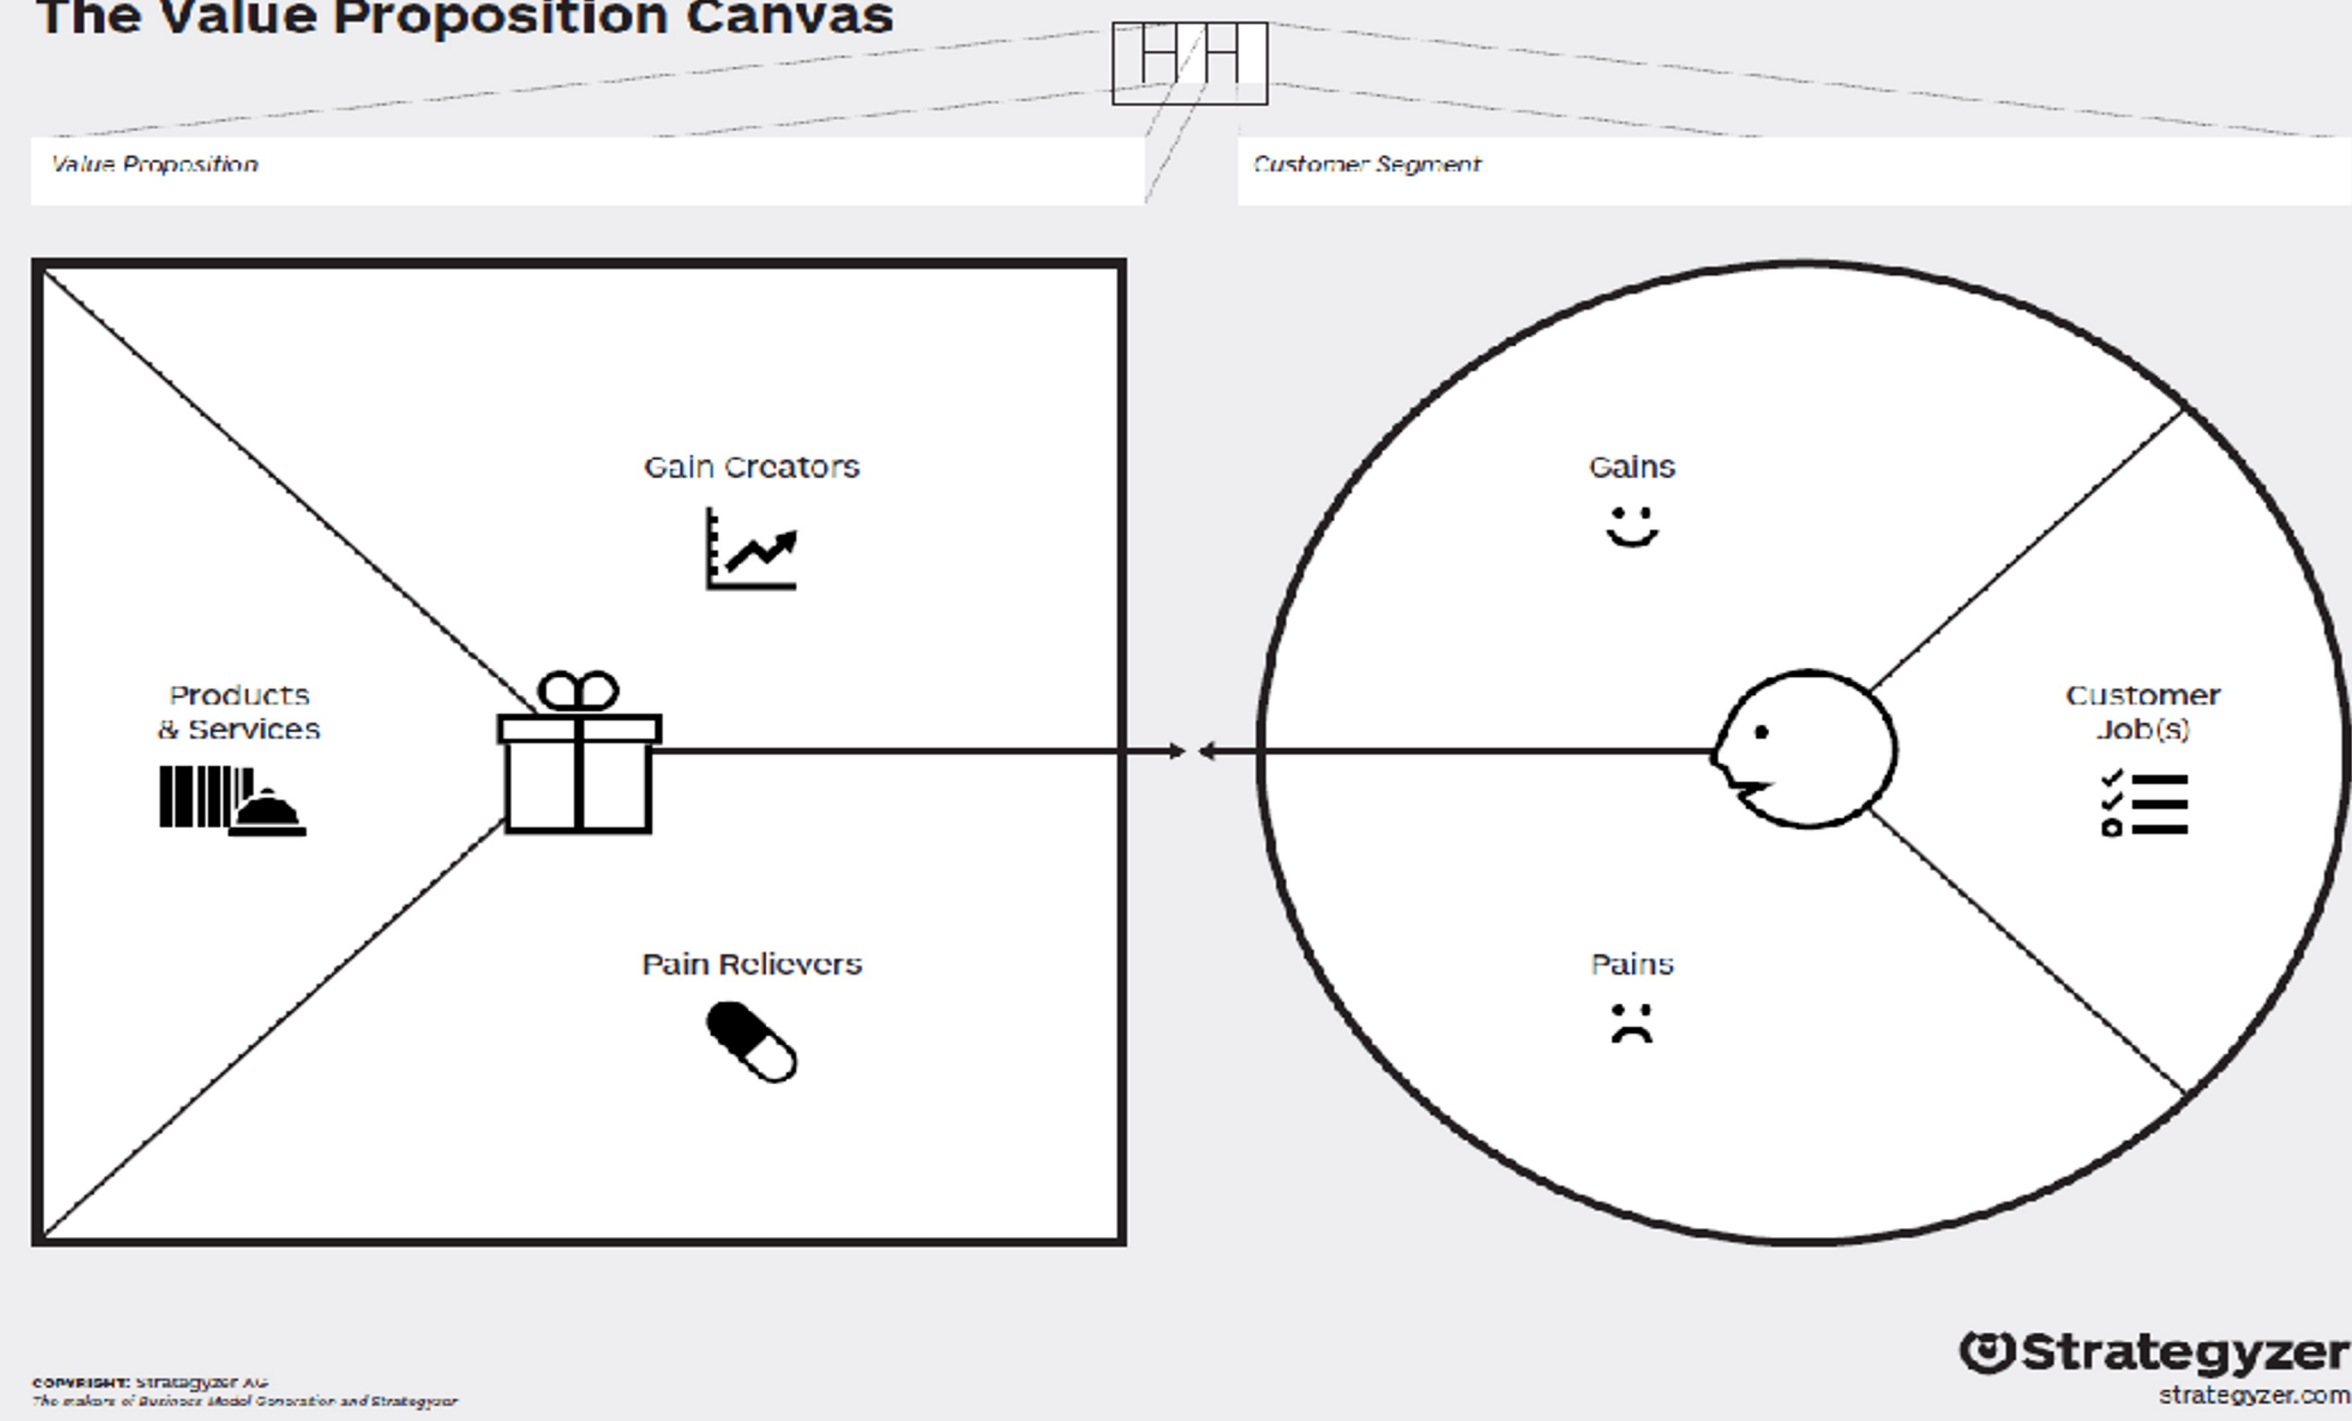

Source: Anonymous. Internet

## A FRAMEWORK TO DESIGN VALUE PROPOSITION

### The Value Proposition Canvas

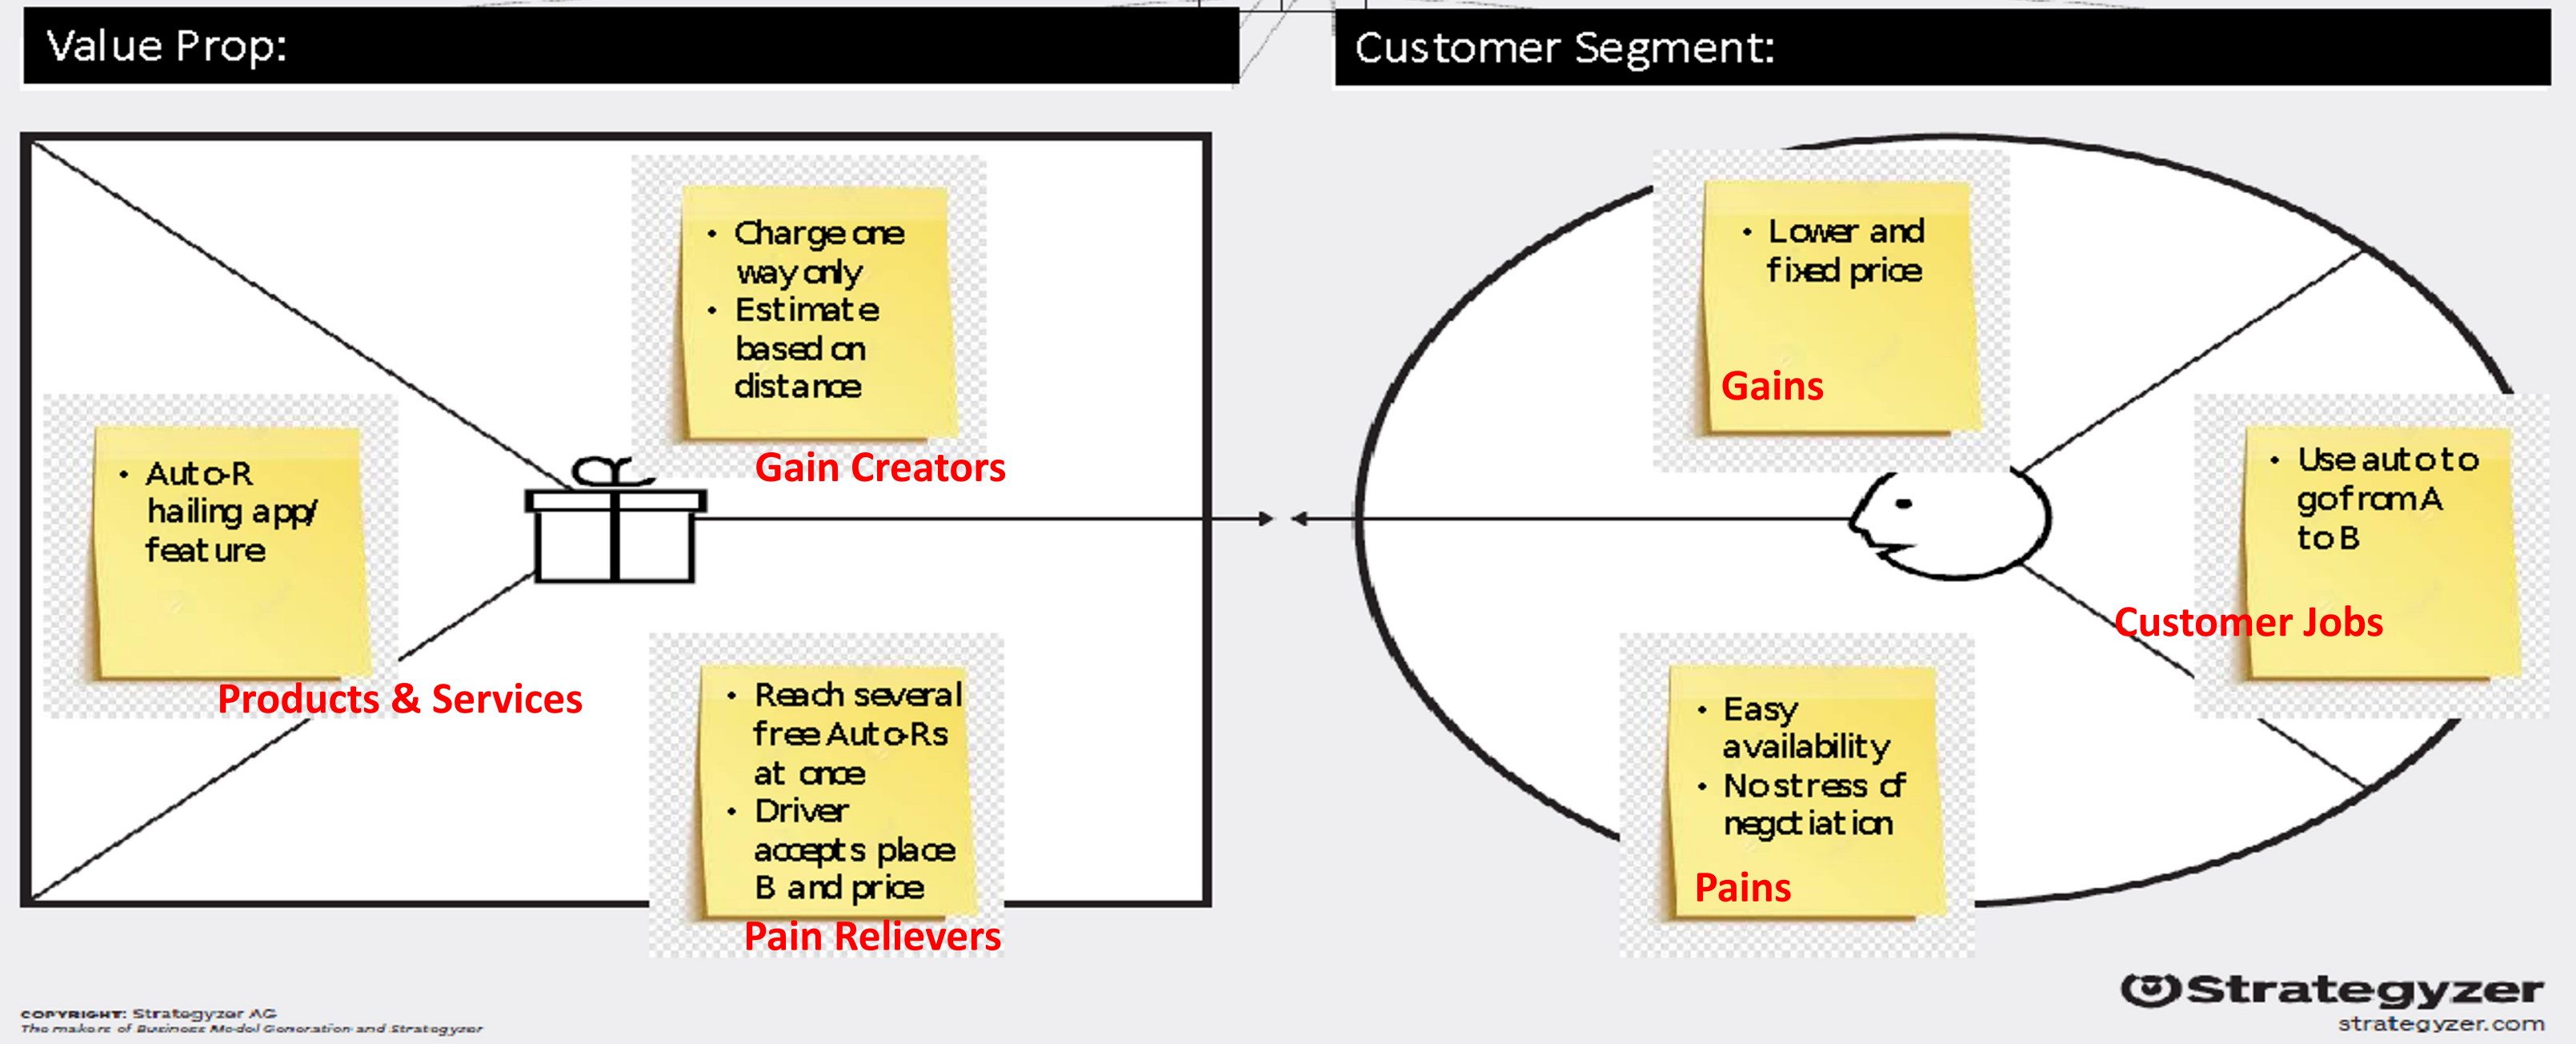

- You can start either side of the canvas; but starting with Customer Jobs (Customer Journeys) makes it easier
- Know the Customer's functional, emotional and social needs.
- Try to be as quantitative as possible
- Focus on one User Persona in each canvas-- (N = 1) approach
- User – Customer mapping is essential
- Don't confuse jobs (=activities, processes) and outcomes (=results)
- Keep unit economics in context

Courtesy: Sundara Nagarajan, IndusAge

## AN EXAMPLE OF VALUE PROPOSITION MAP: AUTO-RICKSHAW HAILING APP

### The Value Proposition Canvas

Courtesy: Sundara Nagarajan, IndusAge

# Strengthening Value proposition

- ❖ Take one customer category at a time
- ❖ List benefits for that customer category from all product offerings in that category including yours; be careful in selecting the alternatives. They have to be the right ones, relevant and important ones that the customer segment can recognize as currently available.
- ❖ What does the product do? - Product vs. Technology, Key value vs. added values
- ❖ Compare the benefits (not “features” or “properties” but benefits; You can have a column of features that make the benefits possible)
- ❖ Where do you really stand out? Is it important for your customer?
- ❖ Where are you unsure? What are uncertain? What experiments do you need to do to illustrate superior benefits to customer? Features, data sheets, price points to demonstrate your claims (DE-RISKING STUDIES!)
- ❖ What will be acceptable to the customer as reliable evidence of superior benefits?

# Exercise 3: Value proposition

Name:

|                                     |                             |          |                              |
|-------------------------------------|-----------------------------|----------|------------------------------|
| 3. Customer offering/ product       | 7. Gain creators (Features) | 8. Gains | 1. Customer segment          |
| 4. Alternatives/ competing products | 6. Pain reliever (Features) | 5. Pains | 2. Desired customer outcomes |

# Exercise 2: Comparison

Name:

| Alternatives -><br><br>Benefits<br>(Gains/ Pains)<br> <br>v |  |  |  |

# Positioning Charts

26

- ❑ Diagnostic – Specificity vs. Sensitivity
- ❑ Battery – power vs. energy
- ❑ Fertilizer – cost vs. yield
- ❑ Drug – Efficacy vs. side effects

# The opportunity

# Opportunity analysis

- ❖ Existing market
  - ❖ Market Research (Secondary, Primary)
- ❖ Emerging market
  - ❖ Project a scenario of the future and project market opportunities; KOL opinions
- ❖ Strategic opportunities: Have options available (ex: Fuel cells R&D at NCL; vaccines during C19)
- ❖ Tactical opportunities: Place on the negotiation table, negotiate prices
- ❖ Funding/ investment opportunities: Ex – having multiple pieces of knowhow and IP in those spaces – say, mRNA modification, LNP; say, applications of CRISPR

# **Risks, uncertainties, competition**

# Competition

<https://hbr.org/2008/01/the-five-competitive-forces-that-shape-strategy>

<https://hbr.org/video/3590615226001/the-explainer-porters-five-forces>

<https://www.business-to-you.com/porters-five-forces/>

# Selected Risks/ Uncertainties

Key risks to usage/ commercialization

- ❖ Technical/ scale-up/ manufacturability risks
- ❖ Freedom to operate/ IP risks
- ❖ Regulatory/ standards/legal hurdles
- ❖ Market risks
- ❖ Industry/ competition risks
- ❖ Financial/ scale of investment barriers

# Status/strength of the technology and IP

|   |  |
|---|--|
| 1 | Basic principle observed                               |
| 2 | Technology concept formulated                          |
| 3 | Proof of concept established                           |
| 4 | Small-scale prototype in the lab                       |
| 5 | Large-scale prototype in the intended environment      |
| 6 | Prototype system verified at near-intended performance |
| 7 | Pilot demonstration at precommercial scale             |
| 8 | Technical and manufacturing processes in place         |
| 9 | Product commercially available                         |

**FIGURE 4. AN INNOVATION'S MATURITY** can be characterized by its technology readiness level (TRL). Research at low TRLs (1–3) is typically performed at universities and funded by grants from foundations and the federal government. Work on technologies at high TRLs (7–9) is often funded by corporations. Startups can help bridge the gap between those development levels.

Careers

 Christine Middleton

## BIRAC TRL Scale

- ◆ Website: [https://www.birac.nic.in/desc\\_new.php?id=443](https://www.birac.nic.in/desc_new.php?id=443)
- ◆ Scales:
  - Drugs (including Drug Delivery)
  - Vaccines
  - Biosimilars
  - Regenerative Medicine
  - Medical Devices and Diagnosis
  - Artificial Intelligence, Big Data Analysis, IoT's, Software Development & Bioinformatics
  - Industrial Biotechnology (including secondary agriculture)
  - Agriculture
  - Aqua Culture and Fisheries
  - Veterinary

# Example: De-risking Rapid RT-PCR

- ❖ POP: Can the RT-PCR be done in 30 min?
- ❖ Reliability of data: R&R
- ❖ **POC: S&S**
- ❖ Certification: Do you have third party test data? Ex IEC.
- ❖ **POV: Does it give quicker AND low false negatives compared to rapid antigen and conventional RT-PCR?**
- ❖ FTO: Does SOP/ method/ tools not infringe another patent? If it does, what is a work around?
- ❖ Own patent: Does data illustrate novelty and non-obviousness?
- ❖ IP coverage: Does it block competitors? Is there data for adequate variations?
- ❖ For KOLs: Is the data suitable and high quality for a peer reviewed publication?
- ❖ For clinical PI: Is the data convincing and credible? Was it done with credible methods and partners?
- ❖ For CDSCO submission: Is it safe? Does it do what it claims (efficacy)? Is data generated after test license? Is data from approved/ NABL labs? Is clinical study design approved? Is the population chosen well? Is the statistics okay?

# Status of IP

- ❖ Provisional → Complete → Grant
- ❖ Age
- ❖ Strength of claims
  - ❖ Type of claim
  - ❖ Patentability; ISR
- ❖ Wide scope of claims
- ❖ Geographical coverage
- ❖ Oppositions
- ❖ Citations by others

# What KOLs/experts have to say

# KOL Opinion

Some things that KOL can comment on:

- ❖ Is the need/ problem being solved genuine and undisputed?
- ❖ How big/ pressing is the need?
- ❖ What are the alternative available today? What are the issues?
- ❖ Will the proposed solution solve the problem?
- ❖ What data would users/ buyers want to see to convince them?
- ❖ What should be the price point?
- ❖ How does the value chain work? What are the channels?
- ❖ Who might be interested in licensing?
- ❖ etc

**Thinking through path ahead and  
strategy**

# Decision framework

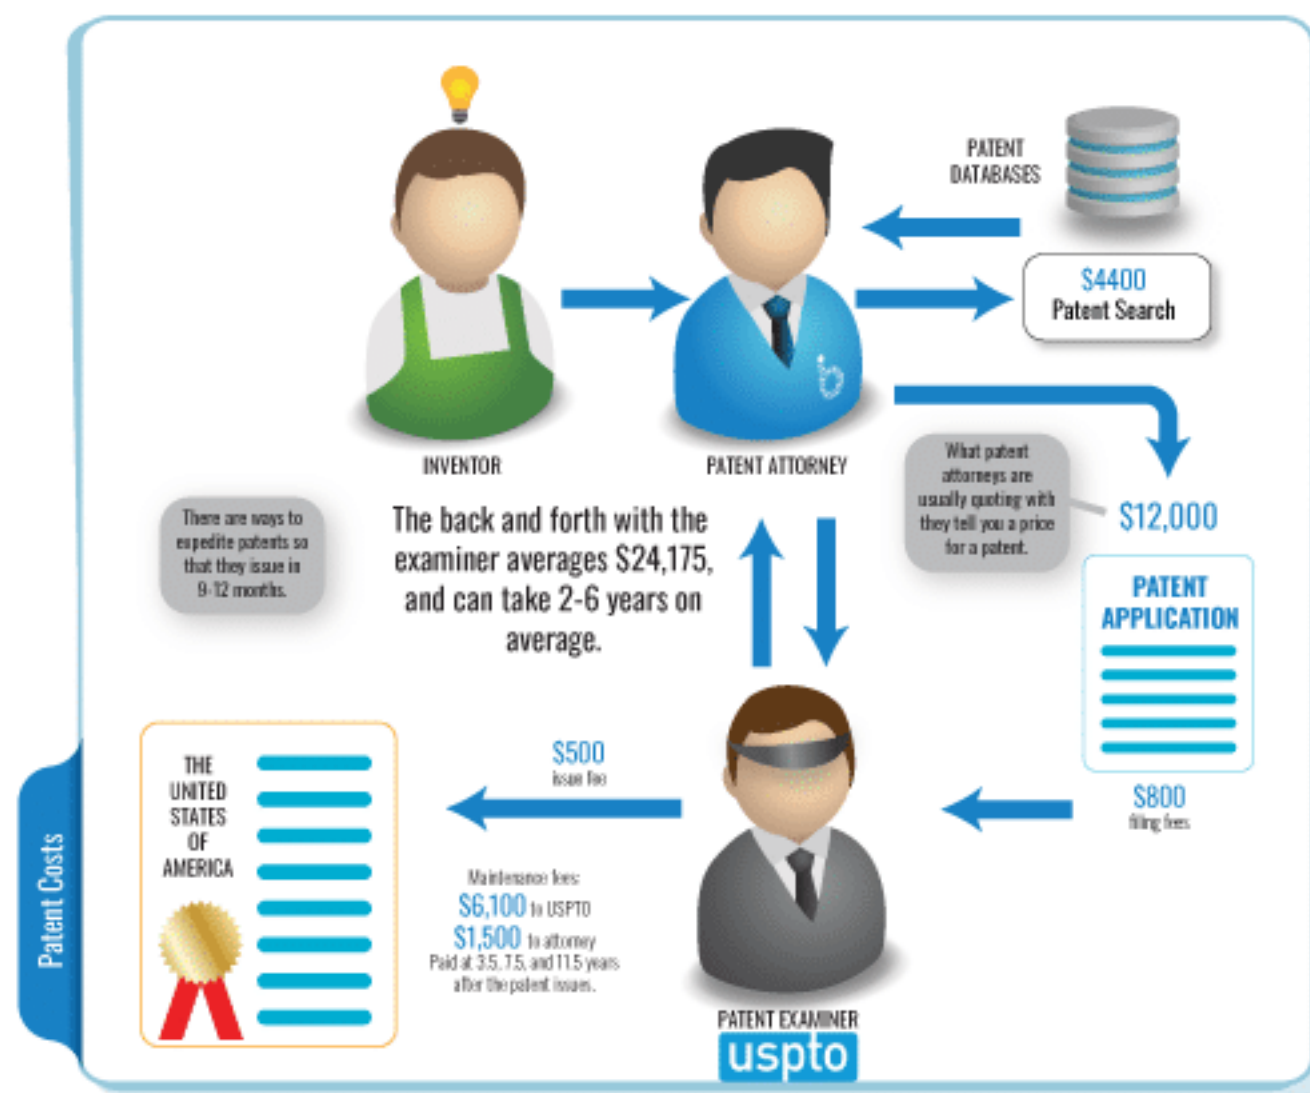

- ❖ What is the potential benefit?
  - ❖ Keep doors open; hold some cards to influence tech journey (“create options” for yourself, organization, country)
  - ❖ Attract resources/ funders/ investors for further development
  - ❖ Attract licensors/ assignees (*sometimes this is overemphasized in academia!*)
  - ❖ Attract development/ co-development projects
  - ❖ Have a voice on the table
  - ❖ Exclude others
  - ❖ Credit/ recognition
  - ❖ Indicator of inventive potential
- ❖ What is the potential cost and risks?
  - ❖ Funds for patent protection
  - ❖ Funds for advancing the technology
  - ❖ Time
  - ❖ Law suits

# IP COSTS

- ❖ Drafting, filing, prosecution services/ IP attorney cost
  - ❖ Statutory fees for filing, examination etc
  - ❖ Others like translation costs
  - ❖ Maintenance fees
- 
- ❖ Note: There is no such thing as an “international patent”. You have to protect individually in each region/ country
  - ❖ Note: Applicant can file directly on their own. But if they use the help of attorneys/ agents, they usually need attorneys/ agents from that region/ country.

**TOTAL COST: \$56,525**

|                              |          |
|------------------------------|----------|
| Fees paid to USPTO and WIPO  | \$12,100 |
| Fees paid to Patent Attorney | \$44,425 |

1. All USPTO fees are based on Small Entity fees. Large entity fees are two times higher. These vary slightly from year to year.
2. All attorney's fees are average fees based on American Intellectual Property Lawyers Association bi-annual survey of 2020.
3. The total cost of \$56,525 is an average cost of a patent in the US with a PCT filing. It reflects the average 4.2 office actions, a 75% probability of a Pre-Appeal Conference, and a 25% probability of a Full Appeal.

# Final examples

## Carbon Nanotube Flow Sensors

Shankar Ghosh,<sup>1</sup> A. K. Sood,<sup>1\*</sup> N. Kumar<sup>2</sup>

We report that the flow of a liquid on single-walled carbon nanotube bundles induces a voltage in the sample along the direction of the flow. The voltage that was produced fit a logarithmic velocity dependence over nearly six decades of velocity. The magnitude of the voltage depended sensitively on the ionic conductivity and on the polar nature of the liquid. Our measurements suggest that the dominant mechanism responsible for this highly nonlinear response involves a direct forcing of the free charge carriers in the nanotubes by the fluctuating Coulombic field of the liquid flowing past the nanotubes. We propose an explanation based on pulsating asymmetric ratchets. Our work highlights the device potential for nanotubes as sensitive flow sensors and for energy conversion.

# Exercise: CRISPR

## Abstract

Clustered regularly interspaced short palindromic repeats (CRISPR)/CRISPR-associated (Cas) systems provide bacteria and archaea with adaptive immunity against viruses and plasmids by using CRISPR RNAs (crRNAs) to guide the silencing of invading nucleic acids. We show here that in a subset of these systems, the mature crRNA that is base-paired to trans-activating crRNA (tracrRNA) forms a two-RNA structure that directs the CRISPR-associated protein Cas9 to introduce double-stranded (ds) breaks in target DNA. At sites complementary to the crRNA-guide sequence, the Cas9 HNH nuclease domain cleaves the complementary strand, whereas the Cas9 RuvC-like domain cleaves the noncomplementary strand. The dual-tracrRNA:crRNA, when engineered as a single RNA chimera, also directs sequence-specific Cas9 dsDNA cleavage. Our study reveals a family of endonucleases that use dual-RNAs for site-specific DNA cleavage and highlights the potential to exploit the system for RNA-programmable genome editing.
